

SRS Inshore Brace (after guy) Donnut

Sydney Rigging Specialists Inshore Donut is designed for the modern One Design Yachts such as Farr 40s, Sydney 38s & 32s, Etchells, and Dragons etc.

The shape of the donut is the same as the Offshore Donut which enables the donut to bear evenly on the spinnaker pole beak when in use yet fall away easy when the pole is tripped off.

Unlike the "Offshore Donut" there is no stainless ring; this means the brace (after guy) is spliced directly onto the clip. The resulting donut is reduced in diameter, lighter & lower profile than the "Offshore Donut". The inshore donut allows the tack of the spinnaker to sit closer to the pole thus reducing the spinnaker luff yawling in bumpy water.

Inshore Donuts are available to suit 6mm, 8mm, 12mm, 14mm & 16mm rope. Custom sizes can be made upon order.
